

NIE mVideo

Dear Colleagues,

The Centre for e-Learning is proud to introduce to you a series of e-newsletters on the mobile applications that we have developed in-house. These apps were created with pedagogical strategies in mind.

NIE mVideo is an iOS app that allows learning to take place outside the classroom so that valuable time can be spent on discussions and clarifications inside the classroom (Flipped Classroom).

You can download this app at <http://www.appstore.com/niemvideo>.

Features:

- Categorise and input videos by topics and subtopics
- Set passwords to protect content from unauthorized access
- Post questions or answer enquiries pertaining to video content
- Create multiple-choice questions related to the video

"I have found mVideo to be an extremely useful application, having tried it on both iPhone and iPad. It enables quick, user-friendly retrieval of the e-lectures that we have developed for the course. In addition, I have also explored its interactive features (such as MCQs) and found them to be a great enhancement over the static deployment available on BlackBoard. The mobility that mVideo affords is especially useful for flipped classrooms where frontal teaching is moved to a digital platform that should be easily accessible on the go."

- Assistant Professor Weninger Csilla (ELL)

If you would like to find out more about this application, do send us an email via celapps@nie.edu.sg. Stay tuned for upcoming issues on other useful applications that you might use in your teaching.
